

BUSINESS

PRESENTATION

Gomolemo Moabalobelo

WELCOME

Project Overview

The objective of this project was to analyze retail sales data to identify top revenue-generating products, evaluate sales performance over time, determine the highest revenue-performing categories and regions, and provide data-driven insights on potential business growth opportunities.

Analysis Performed

To address these objectives, the analysis focused on:

- Revenue trends across different time periods
- Top-selling products and product category performance
- Regional revenue performance and customer activity
- Customer purchasing frequency and spending patterns
- Successful versus cancelled orders across regions

WELCOME

Key Focus of the Analysis

The project primarily focused on:

- Revenue performance
- Sales trends
- Product demand
- Customer behavior
- Regional performance

Note: The dataset did not include cost or expense information; therefore, the analysis focused on revenue performance rather than profitability.

Revenue Trends over Time

Key Insights

- The business generated a total revenue of 560,157, with the 12th hour contributing the highest revenue of 89,513 (15.98% of total revenue).
- The Other category was the strongest revenue driver, generating 48,759 (54.47% of the 12th hour revenue), followed by Bags & Storage with 21,568.
- The 20th hour recorded the lowest revenue at -409, while the 19th hour generated only 2,100 (0.37% of total revenue), indicating very low evening sales activity.
- Categories such as Accessories, Stationery, and Toys & Kids underperformed during low-revenue hours, with some generating no revenue at all during the 19th hour.

Business Insights

- Customer purchasing activity peaks around midday, making the 12th hour the most effective period for promotions, advertising campaigns, and inventory prioritization.
- The strong contribution of the Other category highlights its importance as a key revenue driver, suggesting a need for further product-level analysis and strategic investment in this category.
- The negative and low revenues during the 19th and 20th hours suggest possible refunds, cancellations, or low customer traffic, indicating opportunities for operational improvements, cost optimization, and targeted evening promotions.

Key Insights

- The business generated 560,157 total revenue, with performance peaking in November (9.55%) and May (9.42%), indicating stronger demand during these months.
- Revenue is weakest in February (6.64%), March (6.80%), and December (7.12%), suggesting predictable low-demand periods that may require targeted interventions.
- The “Other” category dominates revenue (53.86%), making it the core driver of business performance and requiring detailed product-level breakdown for better visibility.
- Bags & Storage (21.88%) is the second-largest contributor, while Accessories (0.26%) and Toys & Kids (1.86%) are significantly underperforming.

Business Insights

- Revenue is strongest between May and November, indicating seasonal or demand-driven sales patterns that can be leveraged through targeted marketing, promotions, and inventory planning.
- The “Other” category is the main revenue driver, highlighting the need for deeper product-level analysis to identify key products and optimize marketing and stock strategies.
- Accessories and Toys & Kids underperform significantly, and revenue is also weaker in February, March, and December, suggesting opportunities for targeted promotions, pricing adjustments, and improved product visibility to boost sales and balance performance across categories.

Revenue Trends over Time

Key Insights

- Weekdays generate 74.5% (416,029) of total revenue, while weekends contribute 25.8% (144,128), showing strong weekday dominance.
- The “Other” category contributes 224,638 on weekdays and 77,056 on weekends, confirming it as the largest revenue driver across both periods.
- Bags & Storage contributes 88,584 (weekdays) and 34,003 (weekends), making it the second-strongest category overall.
- Accessories and Toys & Kids remain minimal contributors, with Accessories at 936 (weekdays) and 539 (weekends) and Toys & Kids at 8,208 (weekdays) and 2,204 (weekends).

Business Insights

- Weekday dominance (74.5%) suggests the need for stronger weekend-focused campaigns to improve the 25.8% contribution.
- The “Other” category accounts for the majority of revenue share, indicating over-reliance and the need for deeper product-level breakdown and diversification.
- Underperforming categories (Accessories and Toys & Kids contribute less than 3% combined) require targeted promotions, bundling, or repositioning to improve their revenue contribution.

Key Insights

- The “Other” category dominates more than half of total revenue (53.86%), making it the single most important driver of business performance.
- Bags & Storage contributes a strong 21.88%, showing it is a stable secondary revenue stream but still far behind the dominant category.
- Toys & Kids (1.86%) and Accessories (0.26%) contribute very little, together making up less than 3% of total revenue, indicating weak product performance or low demand.
- The business shows a highly concentrated revenue structure, with over 75% of revenue coming from just two categories (Other + Bags & Storage).

Business Insights

- There is a high dependency risk on the “Other” category, meaning any decline in this category could significantly impact overall revenue.
- Bags & Storage presents growth potential as a strong secondary category that could be further expanded through marketing and product expansion.
- Accessories and Toys & Kids require strategic intervention, such as bundling, promotions, or product repositioning, to improve visibility and increase their contribution to total revenue.

Key Insights

- The “Other” category dominates more than half of total revenue (53.86%), making it the single most important driver of business performance.
- Bags & Storage contributes a strong 21.88%, showing it is a stable secondary revenue stream but still far behind the dominant category.
- Toys & Kids (1.86%) and Accessories (0.26%) contribute very little, together making up less than 3% of total revenue, indicating weak product performance or low demand.
- The business shows a highly concentrated revenue structure, with over 75% of revenue coming from just two categories (Other + Bags & Storage).

Business Insights

- There is a high dependency risk on the “Other” category, meaning any decline in this category could significantly impact overall revenue.
- Bags & Storage presents growth potential as a strong secondary category that could be further expanded through marketing and product expansion.
- Accessories and Toys & Kids require strategic intervention, such as bundling, promotions, or product repositioning, to improve visibility and increase their contribution to total revenue.

Regional Performance-Quantity & Transactions

Key Insights

- The UK dominates transaction activity (81.51%), indicating it is the primary market in terms of customer engagement.
- Europe contributes a moderate share (14.56%), showing some level of consistent but significantly lower activity than the UK.
- The Middle East and Unspecified regions contribute less than 1% combined, indicating extremely weak engagement or possible data gaps.
- Transaction distribution is highly concentrated in the UK, showing strong dependency on a single region for customer activity.

Business Insights

- The business should prioritise retention and expansion strategies in the UK, as it drives the majority of customer transactions.
- There is an opportunity to grow Europe’s transaction base, which is currently underutilised relative to its potential.
- The extremely low activity in the Middle East suggests either market entry failure or lack of targeted marketing, requiring reassessment of strategy or data quality check

Key Insights

- The UK dominates total quantities (81.51%), indicating it is the main driver of product movement and demand.
- Europe contributes a moderate share (14.56%), but remains significantly lower than the UK.
- The Middle East and Unspecified regions contribute less than 1% combined, showing extremely weak demand or possible data limitations.
- The distribution of quantities mirrors transaction patterns, confirming consistent regional dominance by the UK across both sales volume and activity.

Business Insights

- The business should focus inventory planning and supply chain allocation heavily on the UK, as it drives the majority of product movement.
- There is clear opportunity to grow Europe’s contribution through targeted marketing and improved product availability.
- The negligible contribution from the Middle East suggests a need to reassess market viability, logistics, or regional targeting strategy.

Customer Purchasing Trends-Region

06

Key Insights

- The UK dominates the customer base (81.51%), making it the core market for the business.
- Within the UK, moderate buyers form the largest segment (46.99%), indicating stable but not high-value purchasing behaviour.
- High buyers (7.50%) represent a smaller but valuable customer segment, likely contributing disproportionately to revenue.
- The Unspecified region consists entirely of low buyers (100%), showing minimal engagement and low value contribution.

Business Insights

- The business should focus on converting moderate buyers (46.99%) into high buyers (7.50%) through loyalty programs and targeted promotions.
- The high buyer segment, although small, is critical for revenue growth, and should be prioritised for retention strategies.
- The large “other” UK segment (45.51%) needs further analysis to better understand purchasing behaviour and improve segmentation accuracy.
- The Unspecified region shows very weak performance (100% low buyers) and may require data validation or reconsideration of market relevance.

Key Insights

- The UK dominates the customer base, making up 81.51% (81,512) of total customers, confirming it as the core market.
- Within the UK, regular customers account for 37,020 (~45.4% of UK customers), showing strong repeat purchasing behaviour.
- Occasional customers make up 18,500 (~22.7% of UK customers), representing a significant segment with conversion potential into regular buyers.
- One-time customers are extremely low at 52 (~0.06% of UK customers), suggesting strong retention or limited acquisition classification.
- The Unspecified (0.02%) and Middle East (0.08%) regions contribute less than 1% combined, making their impact on customer trends negligible.

Business Insights

- The business should prioritise UK retention strategies, as it accounts for 81.51% of the entire customer base, making it the most valuable market.
- There is strong opportunity to convert occasional customers (22.7% of UK base) into regular customers through loyalty programmes and personalised marketing.
- The extremely low proportion of one-time customers (0.06%) may indicate strong retention or potential data tracking gaps, which should be validated.
- Growth strategies should focus on expanding Europe’s share (14.56%), while carefully reassessing the viability of very small markets like the Middle East.

Customer Purchasing Trends-Region

06

Key Insights

- The overall cancellation rate is low (2.81%), indicating strong order completion performance.
- The UK drives the majority of both successful and cancelled orders, but maintains a relatively stable cancellation rate (2.58%).
- Europe has the highest cancellation rate (3.04%), suggesting slightly weaker order reliability or fulfillment issues compared to other regions.
- The Middle East shows minimal activity, with only 82 total orders and a very low cancellation rate.
- The Unspecified region shows no cancellations, but also extremely low order volume, making it less meaningful for analysis.

Business Insights

- The business is performing well overall with a low cancellation rate (2.81%), indicating efficient order processing.
- The UK remains the most critical region, requiring continuous focus on maintaining stable fulfillment performance.
- Europe's higher cancellation rate may indicate operational or customer experience issues, which should be investigated (e.g., delivery delays, payment failures, or stock availability).
- The low activity in Middle East and Unspecified regions suggests limited market penetration, meaning resources may be better allocated to stronger markets unless expansion strategies are introduced.

RECOMMENDATIONS

- Maximize midday sales performance through targeted promotions, marketing campaigns, and sufficient inventory during peak trading hours.
- Improve weak evening sales by introducing evening promotions, analyzing refunds/cancellations, and optimizing operational costs.
- Reduce dependency on the “Other” category by diversifying products and strengthening secondary categories like Bags & Storage.
- Revive underperforming categories such as Accessories and Toys & Kids through promotions, bundling, better visibility, and pricing strategies.
- Leverage seasonal demand trends by increasing inventory and marketing efforts during high-performing months while introducing strategies for weaker months.
- Increase weekend sales contribution through weekend-exclusive campaigns, discounts, and loyalty incentives.
- Maintain strong focus on the UK market while expanding growth opportunities in Europe through targeted regional marketing.
- Convert moderate and occasional buyers into high-value customers using loyalty programmes, personalized offers, and retention strategies.
- Investigate Europe’s higher cancellation rate by improving fulfillment, delivery processes, and customer communication.

CONCLUSION

The business demonstrates strong overall performance, generating total revenue of 560,157 with clear strengths in the UK market, weekday sales, and midday purchasing activity. The “Other” category serves as the dominant revenue driver, while Bags & Storage provides a stable secondary contribution. Seasonal demand patterns between May and November further indicate strong opportunities for strategic planning and revenue optimization.

However, the analysis also reveals several risks and growth opportunities. Revenue is heavily concentrated in a single category and region, creating dependency risk. Evening sales performance is weak, underperforming categories contribute minimally, and Europe experiences slightly higher cancellation rates. Weekend sales also remain significantly lower than weekday performance.

Overall, the business is in a strong position but can improve long-term sustainability and profitability by diversifying revenue streams, strengthening weaker categories, optimizing low-performing periods, and expanding growth opportunities beyond the UK market. Through targeted marketing, improved operational efficiency, and customer retention strategies, the business can achieve more balanced and sustainable growth.
